DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: current specification, in pages 9 and thereon, uses reference numbers 36 and 37 for "elastic member" which may cause confusion.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the

Art Unit: 2832

reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Sueyoshi et al. US Pat. 6,740,834.

Sueyoshi teaches a vehicle door handle device comprising:
an electrical part 34 (please see fig. 2) received within an internal space formed within a door handle 7;

an elastic member 12 mounted on the electrical member, and is pressed against the inner surface of handle;

a projection (No reference number, please see the attached fig. 2 of Sueyoshi.), projecting corresponding to the elastic member;

the elastic member is pressed against the inner surface of the door handle through the projection;

the door handle includes a handle body 10 and a handle cover 11;

the cover 11 has a reinforcing portion (fig. 4 enclosed) formed along the electrical part, where the cover has a retaining groove 26 (the interlocking portion comprising of two arms) to engage with the claw (single arm in between the groove) to fix the body and the cover to each other; and

the electrical part 34 includes a first electrical part 34 and a second electrical part 32, where a flexible signal wire 56 is attached to the first electrical part.
